TANVIR AHMED AADEEF

Detection Engineer | Offensive Security Specialist | AI Security and Dev Ops Enthusiast

Phone: +61429057259 · Email: t.ahmedaadeef@gmail.com · LinkedIn: Tanvir Ahmed Aadeef · State: Victoria

SUMMARY

SC-200-certified Detection Engineer with hands-on SIEM alert investigation, endpoint telemetry analysis, threat detection, incident response workflows and MITRE ATT&CK-aligned purple teaming. Authored 150+ Elastic Security detections, collaborated with stakeholders and coordinated with L1s and L3s at an MSSP to develop innovative solutions, and orchestrated repeatable purple team Breach and Attack Simulation exercises. I have a background in detection engineering, rule optimization, and automation, and familiarity with GitHub version control, CI/CD concepts and scripting, and recognized by Google and NAB for innovation, collaboration and high-quality team-based work.

SKILLS

Security Operations & Incident Response: SIEM Monitoring, Alert Triage, Incident Investigation, Incident Response, Threat Hunting, Root Cause Analysis, Digital Forensics Fundamentals, IOC Analysis, Phishing Analysis, Stakeholder Communication.

SIEM, EDR/XDR & Security Platforms: Elastic Security, Kibana, Elastic Agent/Fleet, Elastic Defend, Splunk Enterprise/Enterprise Security, Microsoft Sentinel, Defender XDR, Sysmon, Windows Event Logs, Firewalls, IDS/IPS.

Detection Engineering & Purple Teaming: MITRE ATT&CK, Detection Rule Development & Tuning, Elastic Common Schema (ECS), Detection-as-Code, OpenAEV, Atomic Red Team, Breach & Attack Simulation (BAS), Adversary Emulation, Detection Coverage Validation.

Threat Intelligence & SOC Automation: OpenCTI, Threat Actor TTP Analysis, Threat Intelligence Enrichment, TheHive, Grafana, Custom SIEM Collectors, Alert Correlation, AI-Assisted Triage, MITRE ATLAS.

Cloud Security, Automation & Infrastructure: Microsoft Azure, Cloud Security Monitoring, Docker, Kubernetes/K3s, Cilium, Hubble, Tetragon/eBPF, Container & Runtime Security, Python, PowerShell, KQL, SPL, REST APIs, Git/Forgejo, CI/CD.

WORK EXPERIENCE

Detection Engineer Intern — Triskele Labs — Melbourne, Australia **July 2026 - Oct 2026**

- Authored 150+ Elastic Security detection rules mapped to MITRE ATT&CK tactics, including Execution, Persistence and Defense Evasion, expanding testable alert coverage for simulated adversary behaviors.
- Tuned detection queries, ECS mappings and alert conditions to investigate false positives, resolve telemetry mismatches and make validation outcomes more reliable for SOC use cases and overall security posture.
- Designed reusable 158-inject threat actor purple-team exercises in OpenAEV, comparing simulated adversary actions with endpoint evidence to distinguish successful detections from coverage gaps.
- Developed 222 reusable OpenAEV Threat Arsenal Actions, enabling repeatable Breach and Attack Simulation exercises without reauthoring techniques for each validation run.
- Engineered Python integrations correlating OpenCTI threat intel, execution records, Windows process and registry telemetry, and SIEM alerts, helping isolate missed or delayed detections for follow-up tuning.
- Built a 20-technique MITRE ATLAS AI red-team pack and validated adversarial execution indicators in Elastic telemetry, extending testing beyond conventional endpoint threats.

Lead Careers Consultant — La Trobe University — Melbourne, Australia **Jan 2026 - Oct 2026**

- Earned promotion to Lead in Jul 2026, coordinating ambassador rosters, event briefings and student support across university employability initiatives.
- Coordinated ambassador support for the Employability Expo featuring 40+ exhibitors, liaising with staff and students to facilitate event delivery and professional engagement.
- Analyzed engagement across three reporting periods and created event, drop-in and orientation reporting visuals to inform staffing and activity planning.
- Led stakeholder engagement and cross-functional collaboration between Career Ready Ambassadors, university staff and industry representatives, coordinating career development initiatives.

PROJECTS

Architected and Managed a Multi-SIEM Security Operations Centre, with Purple Teaming and AI Security

- Architected a three-SIEM lab integrating Elastic Security, Splunk Enterprise/Enterprise Security and custom AegisForge(Wazuh) SIEM collectors to correlate attack execution, telemetry and alert evidence.
- Authored 170 MITRE ATT&CK-mapped attack commands for OpenAEV simulations against Windows endpoints, supporting repeatable detection validation and identification of coverage gaps.
- Integrated OpenCTI threat intelligence and Git/Forgejo detection-as-code workflows, enabling threat-informed simulations, rule versioning and repeatable regression testing.
- Connected TheHive case management, a custom alert router and Grafana dashboards to SIEM events, demonstrating triage-to-investigation workflows and operational visibility.
- Developed AI-assisted alert triage using Laya, Qwen and Azrael; also built Aegis Ward prompt-injection guardrails and tested prevention/detection with OpenTelemetry and MITRE ATLAS.
- Tested cloud-native runtime observability and resilience using K3s, Cilium, Hubble, Tetragon/eBPF and controlled Chaos Engineering through Chaos Mesh disruption/recovery scenarios.

Azure SOC AI-Enhanced Homelab

- Monitored and triaged simulated security alerts using Microsoft Sentinel, analyzing logs to identify suspicious activities such as failed logins and brute-force attempts
- Investigated incidents using KQL queries, correlating data across multiple sources to determine severity and potential impact
- Tuned detection logic to reduce false positives and improve alert accuracy for SOC-style investigation workflows
- Documented findings, escalation decisions, and response actions in a structured and repeatable format

Network Traffic Analysis & Troubleshooting Lab

- Built a virtual network lab to analyze DNS, ARP, and TCP/IP communication between devices
- Captured and inspected packets using Wireshark to understand DNS queries, ARP resolution, and TCP handshakes
- Performed network diagnostics using ping, traceroute, and Nmap to identify connectivity and latency issues
- Investigated suspicious network behavior by analyzing packet flows and documented events

CERTIFICATIONS

- Microsoft Certified: Security Operations Analyst Associate (SC-200)
- Microsoft Certified: Security, Compliance & Identity Fundamentals (SC-900)
- Splunk Certified Cybersecurity Defense Engineer
- Google Cybersecurity Professional Certificate
- Australian Cybersecurity Games Capture The Flag (CTF) Completion
- IT Specialist - Certiport
- CCNA – Modules 1 & 2 (Cisco Networking Academy)
- Google IT Support Professional Certificate

EDUCATION

Master of Cybersecurity **Mar 2025-Oct 2026**

La Trobe University — Melbourne, VIC

- Coursework in Machine Learning, Network Security, Cybersecurity, Cyber Risk Management and Governance

Bachelor of Computer Science and Engineering **Aug 2019 - Jun 2024**

Independent University, Bangladesh — Dhaka, Bangladesh

- Relevant coursework in Network Engineering, Cloud Infrastructure and Algorithms

ADDITIONAL INFORMATION

Languages: English (C1 Proficiency), Bangla (Native)

Awards/Activities: Google Developers Group Innovation Sprint Award, People's Choice Award – La Trobe x NAB Innovation Challenge, Career Ready Advantage Platinum, Professional Impact Award at La Trobe University
